Professional Summary

Java Full Stack Developer with professional experience in enterprise application development using Java, Spring Boot, Angular, REST APIs, and SQL. Experienced in developing and enhancing enterprise asset management and workflow-based applications, implementing reusable UI components, and troubleshooting application issues. Hands-on project experience with microservices, Kafka, Spring Security, Docker, Kubernetes, and AI-powered applications. Seeking opportunities to contribute to scalable Java backend and full-stack applications.

Professional Experience

Winfocus Solutions Pvt. Ltd.

June 2025 – Present

Java Full Stack Developer

Hyderabad, India

- Developed a multi-tenant Pharma Supply and Consignment Platform using Spring Boot, JPA/Hibernate, PostgreSQL, and Angular, implementing configurable workflow stages, JWT authentication, and role-based access control.
- Enhanced an enterprise Asset Management System for a metro rail client using Angular and REST APIs. Replaced 10 layout-specific screens with a single dynamic-routing component driven by one API call, removing substantial boilerplate and improving reusability.
- Built a reusable Angular Excel bulk-import component with inline validation, extended to 15 dynamic screens, and added audit logging for configuration screens such as roles, privileges, and users.
- Built **NexusCore ERP Work Hub** for internal company use: Spring Boot/Spring Cloud microservices with Angular, JWT and RBAC, project catalog, and Jira-style task management.

Technical Skills

Programming Languages: Java, SQL, JavaScript, TypeScript

Core Java: OOP, Collections, Multithreading, Java 8, Stream API

Backend: Spring Boot, Spring MVC, REST APIs, Spring Data JPA, Hibernate

Security: Spring Security, JWT, OAuth2, RBAC

Microservices: Spring Cloud, Eureka, API Gateway, Kafka, Resilience4j, Saga Pattern

Frontend: Angular, HTML5, CSS3

Databases: PostgreSQL, MySQL, Oracle

DevOps & Tools: Docker, Kubernetes, Maven, CI/CD, Git, GitHub, Postman

Problem Solving: DSA in Java, Sliding Window, Two Pointers, Prefix Sum, Kadane's Algorithm

Personal Projects

Enterprise Order Management System

[GitHub](#)

- Built an eight-service microservices application using Spring Boot, Spring Cloud, Eureka, and API Gateway, with Kafka-based asynchronous communication.
- Implemented distributed transaction handling using the Saga pattern, fault tolerance with Resilience4j, and service security using Spring Security, JWT, and RBAC.
- Containerized services using Docker and developed Kubernetes deployment configurations.

MemoryVerse – AI-Powered Journaling Platform

[GitHub](#) | [Live Demo](#)

- Built a full-stack journaling application using Angular and Spring Boot, featuring AI-powered memory search, favorites, collections, and a responsive user interface.
- Developed REST APIs and persistent data storage to support journal management and application workflows.

SecureAI Assistant – AI Chat Application

[GitHub](#) | [Live Demo](#)

- Developed a full-stack AI chat application using Spring Boot, Angular, and the Hugging Face API, with JWT-based authentication and Google/GitHub OAuth2.
- Implemented per-user chat history using PostgreSQL/Neon and containerized the application for deployment.

Education

B.Tech in Computer Science and Engineering

2020 – 2024

Newtons Institute of Engineering College

Certifications

- Full Stack Java Development – 8-Month Training, JSpiders (Real-time project training)
- Machine Learning with Python – Internship, Skill Vertex
